

AIR CONDITIONING OPTIONS

These portable air conditioners are presented in a range of prices and with a variety of convenient options from which Homeowners can choose.

All units must meet the following requirements:

- **Amperage:** Be between 15-20 amps (though in actuality, at 10 amps, you will find that your lights will dim as they draw energy from other room sources such as lamps and kitchen appliances).
- **Venting:** Vent out a standard window via a hose.
- **Application:** So that the Board will have a record of where AC units are located in the possible event of fire or other events that may be caused by the units, each Homeowner is asked, per our Homeowner's Declaration, to write a letter to the Board, asking permission to install a **portable air conditioning unit.**

Air Cooler Unit Options

Because our electrical outlets do not allow us to have large amperage cooling AC units, and because the cost of having more than one unit may seem prohibitive, the Board has also located Portable Air Coolers so that Homeowners may choose to have them in lieu of or in addition to Air Conditioners if they choose.

The website at which these can be located for purchase is:
